DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-33 are drawn to remote supervisory monitoring , classified in class 702, subclass 188.
- II. Claims 34-41 are drawn to system access control based on user identification by cryptography and especially biometric aquisition, classified in class 713, subclass 186.

Inventions I -II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as detection of illegal assets in containers that does not require system access control by the use of biometric. Invention II has separate utility such as authentication using biometric that does not require the detection of illegal assets in containers. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
